

Expno: 5 Building Reports, Dashboards, and Custom Pages (UI Builder) for the Application Patient Appointment Booking Form — Reporting & Dashboard Use Case

1. Aim:

To extend the Service_Request_Form of the Vehicle Service & Repair Request Management application in Zoho Creator using Advanced Fields — Lookup, Subform, Image, File Upload, URL, Video, Audio, Decimal, Currency, Percent, Formula, Decision Box, Notes, Signature, Date-Time, Auto Number, and QR Code — so that the form can capture vehicle evidence, previous service history, media attachments, cost calculations, and the owner's digital authorization without writing custom code.

This addresses the service center's need to move beyond plain text entries to a complete, verifiable service request: the technician can see the damage photo and issue video, check the previous service history, view the automatically calculated payable cost, and rely on a signed authorization and a unique request ID with a QR code for every record.

2. Procedure:

Step 1: Open the form in the Form Builder — The Vehicle Service & Repair Request Management application was opened and Service_Request_Form was edited in the Form Builder, which already contained the Basic Fields from the previous experiment. The Advanced Fields palette was used for all additions below.

Step 2: Create the lookup source form — A second form named Vehicle_Models was created to store vehicle model and service package details. It appears in the application menu and acts as the source of values for the Lookup field.

Step 3: Add the Vehicle Verification & Evidence section — A new section was added with four fields: Vehicle_Models (Lookup, linked to the Vehicle_Models form), Vehicle Damage Photo (Image upload), Insurance Copy Upload (File upload), and Vehicle Age in Years (Decimal).

Step 4: Add the Previous Service History subform — A Subform named Previous Service History was added with three columns — Service Date (Date), Service Type (Drop Down), and Service Cost (Number) — so that the owner can enter several earlier services using the Add New row option.

Step 5: Add the Service History & Media Details section — Three fields were added: Insurance Policy Portal URL (URL, with an optional Link Name), Vehicle Issue Video (Video upload), and Engine Sound Voice Note (Audio upload).

Step 6: Add the Cost & Pickup Preference section — A Decision Box named Requires Pickup/Drop Service, a Currency field named Estimated Service Cost, and a Percent field named Service Discount Percent were added to capture the pickup choice and the cost inputs.

Step 7: Configure the Formula field — A Formula field named Net Service Cost Payable was added and set to Estimated Service Cost minus the discount percentage applied to it. The field is read-only and calculates automatically (for example, 4,200 with a 10% discount gives 3780).

Step 8: Add the guidelines note — A Notes field named Service Center Guidelines was added to display instructions under the headings Before Vehicle Drop-off, Service & Repair, and Pickup & Delivery, along with an important note about digital authorization.

Step 9: Add the signature and submission time — A Signature field named Owner Digital Signature and a Date-Time field named Service Request Submitted On were added and marked mandatory, so the form cannot be submitted without the owner's signature.

Step 10: Add the system-generated fields — An Auto Number field named Service Request ID and a QR Code field were added. They are generated by Zoho Creator on submission and appear in the record view and report rather than on the entry form.

Step 11: Preview and submit a sample record — The form was saved and previewed in live mode, and a sample request was entered for owner Arun Kumar (TN01AB1234) with the lookup value, damage photo, subform row, URL, and signature filled in. On clicking Submit, the record was created successfully.

Step 12: Verify the record view and acknowledgement email — The submitted record was opened in the report to confirm that the photo, signature, formula result, Service Request ID, and QR Code were stored correctly. The automated acknowledgement email “Vehicle Service Request Received” was also received by the owner.

SERVICE CENTER GUIDELINES

Before Vehicle Drop-off

- Remove all personal belongings from the vehicle.
- Keep the vehicle keys ready for handover.
- Carry a valid vehicle insurance document.

Service & Repair

- The estimated cost may change after vehicle inspection.
- Additional repair work requires owner approval.
- Major repair findings will be communicated to the owner.

Pickup & Delivery

- Pickup/drop timing will be confirmed by the service center.
- Ensure the pickup address and contact number are correct.

Important: By providing your digital signature, you authorize the service center to proceed with the estimated service work.

Owner Digital Signature *
