

Data modelling and form design for a business application in Zoho Creator.

Aim

To design and develop a **Vehicle Service & Repair Request Management** application in **Zoho Creator** using all thirteen Basic Field types available in the Form Builder. The application is designed to collect vehicle owner details, contact information, vehicle and issue details, service scheduling preferences, and repair authorization, and to store the submitted information in a service request report for service center management.

Procedure

1. Open **Zoho Creator** and sign in using a Zoho account.
2. Create a new application named **Vehicle Service & Repair Request Management**.
3. Create a form named **Service_Request_Form**.
4. Create four sections in the form:
 - o Owner Details
 - o Contact Details
 - o Vehicle & Issue Details
 - o Scheduling & Authorization
5. Add the required **13 Basic Fields** to the form:
 - o Name – Owner Name
 - o Email – Email Address
 - o Address – Pickup Address
 - o Phone – Contact Number
 - o Single Line – Vehicle Registration Number
 - o Multi Line – Issue Description
 - o Number – Odometer Reading
 - o Date – Preferred Service Date
 - o Time – Preferred Drop-off Time
 - o Drop Down – Vehicle Type
 - o Radio – Service Type (Routine Service / Breakdown Repair / Accident Repair)
 - o Multi Select – Additional Services Requested
 - o Checkbox – Authorize Estimate and Repair
6. Configure the required fields as **mandatory** (Owner Name, Contact Number, Vehicle Registration Number, Vehicle Type, Service Type) and provide appropriate options for fields such as Vehicle Type, Service Type, and Additional Services Requested.
7. Configure validations such as **Odometer Reading restricted to positive values only**, valid email format, country code format enabled for Indian phone numbers, and prevention of past service dates.
8. Make the **Authorize Estimate and Repair** checkbox mandatory so that the form cannot be submitted without the owner's authorization.
9. Save and preview the form to verify that all fields and validations work correctly.
10. Create a **List Report** named **Service_Request_Form_Report** using the submitted form data.
11. Enter at least **three sample service request records** and verify that they appear correctly in the report.
12. Use the report to view and filter service requests based on **Service Type** and **Preferred Service Date**.
13. Configure an automated **acknowledgement email** (using the Email field value) to be sent to the owner on form submission.
14. Capture screenshots of the **Form Builder, Live Preview, Report View, Printed Record, and Acknowledgement Email** as required for the lab record.

Vehicle Service & Repair Request Management

Section A — Owner Details

- Owner Name (First Name, Last Name)
- Vehicle Registration Number (Single Line)
- Vehicle Type (Drop Down)

☐ I authorize the service center to prepare an estimate and proceed with the work

6. Validation Rules to Configure

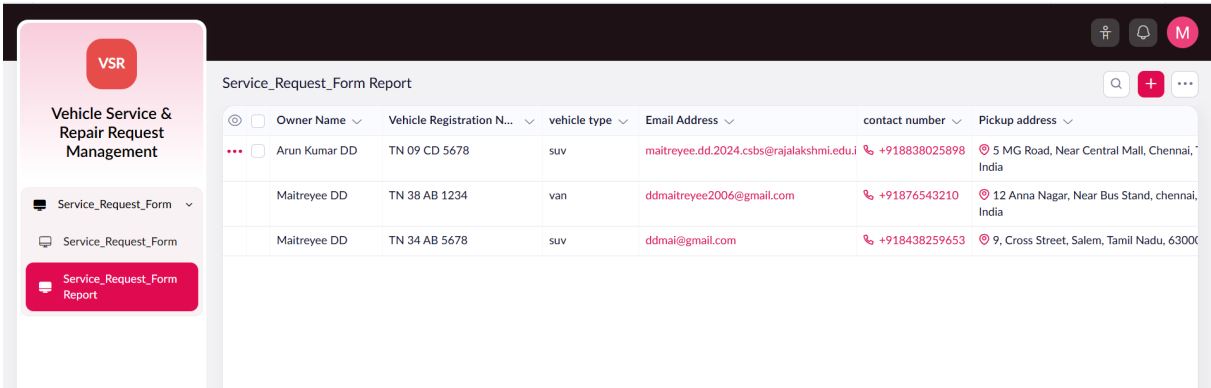

- Owner Name, Phone, Vehicle Registration Number, Vehicle Type, Service Type, and Authorization Checkbox are mandatory fields.
- Email field: built-in email format validation enabled.
- Phone field: country code format enabled for Indian numbers.
- Number field (Odometer Reading): restrict to a positive value only.
- Date field: restrict Preferred Service Date to disallow past dates.
- Checkbox (Authorization): form cannot be submitted unless checked.

7. Workflow Summary

- Step 1: Owner opens the public form link shared via the service center's website or SMS.
- Step 2: Owner fills in personal, vehicle, issue, and scheduling details across the four sections.
- Step 3: On clicking Submit, Zoho Creator validates all mandatory fields and formats.
- Step 4: A new record is created in the Service_Request_Report.
- Step 5: An automated acknowledgement email (using the Email field value) is triggered to the owner.
- Step 6: The service center reviews the report, filters by Service Type and Preferred Service Date, and assigns a technician and service bay ahead of the vehicle's arrival.
